Evgeny Gamza

AQA | SDET

Tbilisi, Georgia

Email · Telegram · LinkedIn · GitHub · PDF CV

Professional Summary

QA Automation Engineer / SDET with 5+ years of combined software engineering and QA experience, focused on backend automation, API and integration testing, and quality in distributed systems. Builds automation projects from the ground up and integrates them into CI/CD. Selects test levels and techniques based on product risks, and shapes frameworks, test data, reporting, and workflows for team use. Experience spans financial processing, e-commerce microservices, and scientific software. Also works with prompt testing and uses AI tools to support test creation and analysis, validating their output.

Technical Skills

- **Languages:** Python, Go, SQL
- **Automation:** pytest, Gomega, Allure, Selenium, Playwright, CodeceptJS
- **Testing:** API, integration, regression, performance, prompt testing
- **Backend and messaging:** REST, GraphQL, gRPC, Kafka, microservices, distributed systems
- **Databases and cache:** PostgreSQL, MariaDB, Redis
- **Infrastructure and CI/CD:** Docker, Kubernetes, GitLab CI, Jenkins, pyinfra
- **Performance and service virtualization:** Yandex.Tank, WireMock
- **Version control:** Git

Professional Experience

TradingView — Senior Quality Assurance Automation Engineer

May 2026 – October 2026

- Developed an AI-powered investigation skill using MCP tools to query databases, search internal and FactSet documentation, and trace data quality issues to their source.
- Automated repetitive data investigations, reducing manual triage time.
- Communicated with FactSet to investigate and resolve vendor-side data issues.
- Created tests for new data-related tasks and automated help desk workflows with a bot.
- Built a bot to detect invalid data and route it to the acceptance queue for review.
- Investigated data quality issues across ETL (Extract, Transform, Load) workflows.

PLATA / Diftech — QA Automation Engineer

July 2024 – October 2025

- Developed Go integration tests with Gomega and Allure for a financial processing platform.
- Tested backend microservices and service integrations over gRPC, REST, and Kafka, using PostgreSQL for data checks.
- Covered payment processing, card management, subscriptions, insurance services, and ISO 8583-related functionality.
- Tested integrations and migrations involving Phoenix and Galileo processing systems.
- Investigated failures across distributed services and maintained automated test execution in CI/CD pipelines.

Ozon Tech — QA Automation Engineer

August 2022 – May 2024

- Built an API automation suite from scratch with Python and pytest for backend microservices.
- Contributed to integration testing with Go.
- Developed and maintained UI automation using Selenium with Python and CodeceptJS.
- Performed API, integration, regression, and performance testing across a distributed microservice environment.
- Used SQL to validate backend data and integrated automated checks into CI/CD.

IZMIRAN — Lead Software Engineer

August 2018 – August 2022

Pushkov Institute of Terrestrial Magnetism, Ionosphere and Radio Wave Propagation.

- Developed and maintained scientific software and scripts for processing geomagnetic observations.
- Designed and tested a MariaDB database for observations collected from multiple stations, including stations with unreliable connectivity.
- Maintained scientific services, websites, and monitoring systems.
- Performed regression testing and validated scientific datasets and geomagnetic field models.

Education

- **Russian State University for Geological Prospecting** — Faculty of Geophysics, 2018
- **Yandex Practicum** — QA Engineer training, 2021–2022
- **Stepik** — Test Automation with Selenium and Python, 2022

Languages

- Russian — Native
- English — B2
