Evgeny Gamza

Senior QA Automation Engineer / SDET

Tbilisi, Georgia

Email · Telegram · LinkedIn · GitHub

Professional Summary

QA Automation Engineer with 5+ years of combined software engineering and QA experience. Focused on backend test automation with Python and Go, API and integration testing, and investigating failures across distributed systems. Experience in financial processing, e-commerce microservices, and scientific data processing.

Technical Skills

- **Languages:** Python, Go, SQL
- **Automation:** pytest, Gomega, Allure, Selenium, Playwright
- **Testing:** API, integration, regression, performance
- **Backend:** REST, GraphQL, gRPC, Kafka, microservices, distributed systems
- **Databases:** PostgreSQL, MariaDB
- **Tools:** Git, Docker, Jenkins, CI/CD

Professional Experience

Fanjara rock+ bar - Founder & Owner

September 2025 - September 2026

- Founded and operated a hospitality business, introducing a new brand and concept at an existing bar location.

PLATA / Diftech - QA Automation Engineer

July 2024 - October 2025

- Developed integration tests in Go using Gomega and Allure for a financial processing platform.
- Tested backend microservices communicating through gRPC, REST, and Kafka, working extensively with PostgreSQL.
- Covered payment processing, card management, subscriptions, insurance services, and ISO 8583-related functionality.
- Participated in integration and migration testing involving Phoenix and Galileo processing systems.
- Investigated failures across distributed services and worked with CI/CD pipelines for automated test execution.

Ozon Tech - QA Automation Engineer

August 2022 - May 2024

- Built API test automation from scratch using Python and pytest for backend microservices.
- Worked with integration tests written in Go.
- Developed and maintained UI tests using Selenium/Python and CodeceptJS.
- Performed API, integration, regression, and performance testing.
- Used SQL for backend testing and worked with CI/CD in a distributed microservice environment.

IZMIRAN - Lead Software Engineer

August 2018 - August 2022

Pushkov Institute of Terrestrial Magnetism, Ionosphere and Radio Wave Propagation.

- Developed and maintained scientific software and scripts for processing geomagnetic observations.
- Developed and tested a MariaDB database for observations from multiple stations operating with unreliable connectivity.
- Maintained scientific services, websites, and monitoring systems.
- Performed regression testing and worked with scientific datasets and geomagnetic field models.

Selected Projects

Weather API & Database Tests

Source code

Python/pytest project combining weather API requests with database operations and checks of stored data. Includes API and database helpers, fixtures, parametrized tests, and a GitHub Actions workflow.

TenK - Practice Tracker

Source code

Flutter application for tracking practice sessions. Includes tests for session creation, editing, deletion, and persistence through a fake repository, along with widget smoke tests and CI test execution.

Queue Monitoring Bot

Source code

Python automation project combining Playwright browser interactions, a Telegram bot, and database integration to check and maintain a consular waiting-list position. Includes Docker packaging and a GitHub Actions image build workflow.

Education

- **Russian State University for Geological Prospecting** - Faculty of Geophysics, 2018
- **Yandex Practicum** - QA Engineer training, 2021-2022
- **Stepik** - Test Automation with Selenium and Python, 2022

Languages

- Russian - Native
